Molecular cloning and characterization of cDNAs for a membrane-associated G-protein from rat brain. Sequences coding for the 3'-untranslated region of a cDNA for a membrane-associated G-protein were isolated from a rat brain cDNA library. The cloned cDNAs were 5.5 kb in length and contained an open reading frame of 2108 amino acids. The predicted amino acid sequence showed extensive homologies to alpha-subunits of other G-proteins. It also showed a high degree of similarity to the large cytoplasmic portion of alpha- and beta-subunits of Gs-proteins. The 3'-untranslated region of cDNA contains AT-rich polyadenylation sequences and is rich in oligo-C and poly-A stretches. Lung resection for cancer in patients with pulmonary restriction. We analysed the results of lung resection for lung cancer in patients who also had restrictive pulmonary disorders. Among the 1,095 lung resections between 1979 and 1990 performed at our institution, 19 were carried out in patients who also had restrictive disorders. Comparison of the postoperative course for patients with lung resection and restrictive pulmonary disease with those with lung resection but no restrictive disorder showed that both the time to extubation (6.3 vs. 3.7 days; p Q: Matlab: testing whether cell array is vector-sized array I have 2 cell arrays. If the first contains doubles, the second one should contain either doubles or strings. I need to run this operation: sum(test) Where test is a cell array. If it is not a double cell array, it should be treated as a string array. I used the following code but it returns 0 which is probably because the cell array is not properly converted to a vector
